

Modeling a Data Storage Application

Description:

This algorithm aims to separate and store the data in files, later obtaining some information.

Language:

To develop this algorithm we will use the C# programming language.

Classes

Store

Attributes:

- datatext
- datacompound
- datanumber

Methodes:

- insert_filter
- search
- remove
- save

CheckType

Attributes:

- none

Methodes:

- checkTypeFunction

Analyze

Attributes:

- datatextcopy
- datacompoundcopy
- datanumbercopy

Methodes:

- media
- standardDeviation
- frequency
